

AVIATION SUPPLY SPECIALIST

Summary

Military professional with 11 years experience in team management, administrative accountability and supply management. Effectively managed more than \$300 million in personal and procurable equipment. A value asset to the Aviation Supply Department I was able to perform in many areas of logistical support ranging from safety of equipment and personnel to proper shipping and handling of material. Several characteristics and traits are developed while serving on active duty. Responsibility, accountability, trust, judgment, and leadership just to name a few. Growing and advancing in the ranks of a Marine, it takes a great deal of Pride, Honor, Courage and Commitment. My experience has allowed me many great opportunities to develop and enhance these traits and over time, some of these traits become a requirement. That's when the accountability and leadership skills begin to take over. As a Leader of Marines, I took charge of my subordinates supervising the functionality of proper and professional warehouse management and customer service.

Highlights

- Effective team leader
- Supply and logistics planning
- Data management
