

# Navigator

---

*Go Up to [Third Party Software Add-Ins](#)*

Navigator is an IDE tool that consists of two main functions. The Go To window helps you find specific items in your code. The Minimap replaces the vertical scroll bar. It highlights the section your working on or the most accurate results in your Go To search.

## Installing and Uninstalling Navigator

### Installing Navigator

**Navigator 1.6.0** is available in [GetIt Package Manager](#). You can download the package and install it by following the general instruction provided in [Installing a Package Using GetIt Package Manager](#).
