Issues debugging Delphi Android 64-bit applications have been resolved

We've just released a patch for Delphi 10.3.3, addressing the following issues when debugging Android 64-bit applications on Android devices:

- RSP-26704 Debugging 64 bit Android application hangs the IDE
- RSP-26824 Breakpoints do not work in Android 64 project
- RSP-26774 Unable to start GDB kernel after switching from debugging 32 to 64 Android
- plus a number of internally reported issues including issues in the following areas:
 - evaluating expressions or variables
 - connecting to an Android device
 - slowdown of a debugged app when the debugger is attached
 - handling very large source files
 - switching threads from the Threads view
 - displaying memory in the CPU view
 - and others.

The patch is available at <https://cc.embarcadero.com/item/30904>. Full installation instructions are located in the readme.

Reduce development time and get to market faster with RAD Studio, Delphi, or C++Builder. Design. Code. Compile. Deploy.
