

Try making the
joining stroke
lighter?

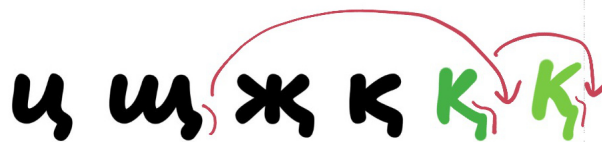

The upturn in /г/ is
semantically close to the
descender in /д/. It may be
heavier(longer) than the
normal descender, but
rarely lighter

Reminder to not forget
kerning. Alternatively
create a ligature with
smaller diacritics

Have you considered
a diagonal movement
in /ю/ similar to /ы/?

You can add inflections
to the descender

You can try these
handwritten forms
