- + Add Function to JavaScript menu.

JavaScript Plus! – Version History

- + Added more useful links to help panel.
- + Now JavaScript Plus! supports project files (.jsp files).
- + Added 7 new submenu elements to Help Menu
 - JavaScript Reference 1.3
 - JavaScript Reference 1.4
 - JavaScript Reference 1.5
 - JavaScript Guide 1.3
 - JavaScript Guide 1.4
 - JavaScript Guide 1.5
 - JScript Reference.

You can get this files from here : <http://www.vbsoftware.cl/reference.htm>

Download all files and install inside your javascript plus folder.

Follow the next instructions to install help files :

- Creates a folder named reference.
- Inside the reference folder creates the next folders :
 - GuideJS13
 - GuideJS14
 - GuideJS15
 - referenceJS13
 - referenceJS14
 - referenceJS15

JavaScript Guide

- Unzip ClientGuideJS13.zip to GuideJS13 folder.
- Unzip CoreGuideJS14.zip to GuideJS14 folder.
- Unzip CoreGuideJS15.zip to GuideJS15 folder.

JavaScript Reference

- Unzip ClientReferenceJS13.zip to referenceJS13 folder.
- Unzip CoreReferenceJS14.zip to referenceJS14 folder.
- Unzip CoreReferenceJS15.zip to referenceJS15 folder.

- * Improved online help for markup elements.
- * Improved tidy performance.
- * Improved jslint performance.
- * Improved splash startup. (5 seconds at PENTIUM IV 1.7 512 RAM, Win200 PRO SP4)
- * Fixed bug with "open from web" option. (a very hard bug ...)
- * Fixed bug when html tag are written in uppercase.
- * Improved New Menu (added new plus options)
- * Improved Plus Menu (added new plus options)
- * Improved help panel
- * Improved JavaScript reference for autocomplete
- * Improved HTML reference for autocomplete
- Removed functions menu from menu bar. (don't very useful and a lot of windows resources ...)
- Removed View Menu. Toolbars now can be hidden/shown from tools menu.

Version Version 3.0.263 - First Beta 1 released.

- + Added startup log. If startup process is not completed this will check startup problems on any pc. (Win 2000 SP4, Win 98)
- * Fixed bug in code explorer. (Tags without " ")

Version 3.0.262 - First Beta 1 released.

+ Added tip of day.

Version 3.0.261

* Fixed a bug for all text insertions over 920 line codes. This bug applies all Javascript Plus! previous versions.

A very interesting bug was discovered.

To reply this bug:

Open a document that contains over 1000 lines of code. Press CTRL+G (goto line) and input 1000. Insert a single comment and this action isn't executed.

All text insertion are stoped to add text from specified cursor position.

The problem applies to CodeSense control.

* Improved for help file.

Version 3.0.260

+ Added double click for new document.

+ Added multiple instances of javascript plus! for registered users.

+ Added right menu associations when user opens a document for windows explorer.

* Improved file associations when user open document using double-click from windows explorer.

* Fixed javascript plus! icon association.

* Improved help file.

3.0.259

* Fixed bug at close document. Sometimes changes in editor wasn't detected.

* Fixed bug when recent list value changes.

* Added file extension (.txt) when creates a new template.

+ Added a cancel button when try to close a document. (Yes/No/Cancel)

+ Added Tidy/JSLint to Help menu.

Version 3.0.258

* Improved Insert|ASP menu.

* Improved Menu|New.

+ Added Insert|PHP Menu.

+ Added Insert|SSI Menu.

- Removed My Templates from New window.

Version 3.0.257

+ Improved new file. Now user can choose create a file from (Javascript,Html, Template,Plus!,Samples for learners,My Templates). Still working in this functionality.

+ Added a preferences menu.

+ Added file drag & drop support.

* Improved jsplus filesize. Ftp functions now are stored inside vbsftp.dll.

* Changed Column Select to Vertical Select menu item.

Version 3.0.256

VBSoftware

<http://www.vbsoftware.cl>

Santiago, **Chile**

- * Improved preview in browser. Preview filename using older DOS 8.3 format (only for browser compatibility).

Version 3.0.255

- * Fixed missing help descriptions for html tag. File htmlitemhelp.ini fixed inside config folder.
 - * Fixed activating help for html attributes in help window.
 - * Improved preview in browser. (Testing with Iexplore,Firefox,Netscape & Opera).
- Removed menu items when popup menu is shown. Popup menu is now a little small.

Version 3.0.254

- * Fixed bug in function explorer. Detected bug when line begins with chr\$(9).
- * Removed nag screen for registered users.
- * Fixed bug in code explorer. Problem reading document with style sheets reference.
- * Fixed bug when save all files. (ftp account problem).
- * Added connection checking for ftp actions. Still testing
- * Fixed size for Tidy Output window.

Version 3.0.253

- * Fixed bug Insert User Template.
- * Improved editor settings.

Version 3.0.252

- * Fixed insert text only into edit window. Heavy bug & hard work fix them. ;)
- * Fixed shortcuts menu keys. Missing & repeated shortcut menu access.
- * Fixed problem with detection of ftp folders. Bug fixed.
- * Fixed problem ftp manager when deletes,renames without select a file.
- * Fixed bug for port 0 in account settings configuration.
- * Fixed setup last folder in ftp manager. Previous version always started with current folder.
- * Fixed bug for function explorer/code explorer when saves empty documents.
- * Fixed event form bug.
- * Fixed bug for function list from event form.
- + Added start from root folder when last folder not exists.

Version 3.0.251

- * Fixed ftp incorrect date/time format.
- * Improvements for ftp functions.
- * Improvements for screen resolution at 800x600.
- + Added column information for attributes,owner,group to ftp manager.

Version 3.0.250

- * Fixed ftp date/time & improved ftp interface.
- * Fixed save to ftp bug.
- * Fixed property explorer bugs.
- * Fixed plugin wizard grammar error.
- + Added Javascript reserved words to javascript menu.

Version 3.0.249

- * Fixed open from web error.
- * Fixed load code explorer & function explorer when open from web.

JavaScript Plus! – Version History

- * Fixed missing save changes when file was opened using open from web.
- * Fixed missing preview in browser if iexplorer,firefox,opera,netscape don't exists.
- * Fixed bug for html intellisense. Previous help for empty line display previous tag.
- * Fixed save/restore toolbars positions.
- * Fixed tidy bug when active document is not a edit document.
- * Improved Toolbars only can be docked above.
- * Improved startup time. Speed up 20%.
- * Improvements tidy output.
- + Added information for Runtime & Sintax number errors.
- + Double click go to line in tidy output.
- + Double click in tidy task list executes selected task.
- + Language files for each html extension. Testing html & javascript.
- Removed left,right and bottom dock panel. Problem with dock component.
- Removed possibilities to undock toolbars. (Only Show/Hide)

Version 3.0.248

- + Tools Menu
- Validate HTML/XHTML
- Validate CSS
- Validate Hyperlinks
- Validate XML
- + Trial System (Testing)
- + Update checker for registered copy (Testing)
- + Help File
- * Improved Help File
- * Sorted countries for content language

Version 3.0.247

- Improved plugin generator.

Version 3.0.246

Fixed bugs for :

- function explorer
- code explorer
- Tidy configuration problems
- Tidy save settings
- Default task for tidy on main toolbar
- Missing close tag for htmlhelp.ini
- Filename in print preview

Added

- toolbar to function explorer
- toolbar to markup browser
- toolbar to javascript browser
- editor settings

Improved

- minor changes for markup browser
- minor changes for javascript browser
- changed icons for alert,confirm & prompt on main toolbar

Removed

- Plugins Menu. Moved to Tools Menu
- View ->

File explorer
Javascript browser
Markup Browser
Clipboard
Color Browser
Quick Help
Online Help
Ansi Explorer
Property Explorer

Version 3.0.245

+ Added
* Fixed
- Removed

* Improved function explorer. Now jsplus can detect functions defined with a constructor "function ..." and "function expressions".

Example:

```
JSONIC.autoElement = function (n, f) {  
JSONIC.element[n.toLowerCase()] = f;  
};  
  
HuiUtil.setHuiDisplayed = function( isDisplayed )  
{  
/* code goes here */  
}
```

Thank you to Douglas Crockford & Stevens Doug.

Version 3.0.244

+ Added icon for Find in Files
+ Display path file in statusbar when user clic on tab file.

* Table cell
* Ansi browser
* Frame icon from htm toolbar
* Item help for regular expression (file path error)
* Icon for item help
* Preview in browser only for active edit.
* Insert array only for active edit.
* Insert statements only for active edit.
* Escape Character only for active edit.
* Regular Expression only for active edit.
* Insert pretemplate only for active edit.
* Save to FTP only for active edit.

- Refresh for javascript toolbar

Version 3.0.240

+ Popup Menu at Right click on editor.
+ Preview in browsers at right click. (iexplorer, firefox, netscape, opera)
+ Online help now read info from config path. The info is stored into help.ini. The config file from help files is not ready.

JavaScript Plus! – Version History

- + Item help at right click. You can get help for html tag & javascript code.
- + Edit|Word Count.
- + Edit|Column select.
- * Fixed JSLint links from toolbar & tools menu.
- * Functions menu has new 6 menu elements. (Date functions, Document Functions, Events, Math Functions, String Functions, Window Functions)
- * Fixed code explorer & function explorer.

Version 3.0.234

- + Configure browser paths
- + Preview in browser
- + Insert Cascading Style Block
- + Toolbar File|Open from FTP ...
- + Toolbar File|Open from WEB ...
- * Improved insert Style Sheet Link
- * Fixed removed temp files
- * Fixed code explorer & function explorer

Version 3.0.230

- + ASP MENU
- + ASP Includes
- + ASP Delimiter
- + ASP String Output
- + ASP Server Variable
- + ASP If Condition
- + ASP Else Condition
- + ASP End If Condition
- * Find In Files
- * Home Page Icon
- * MetaTag Wizard
- Restore toolbars position (bug with restore_layout method)

Version 3.0.224

- + Jslint features
- + Open from ftp
- + Save to ftp
- + Open from Web
- + Show/Hide toolbars
- + Save/Restore Toolbars
- + Plugins
- + Find in Files
- + Save As Template

Version 3.0.170 Alpha 1 Jul/19/2005

- + A new look
- + Docked toolbars
- + Html Intellisense

- + Improved File Explorer
- + Improved Javascript Explorer
- + Improved Html Explorer
- + Added Code Explorer
- + Added Property Explorer
- + Added Clipboard Window
- + Added Help Explorer
- + Added Tidy
- + Improved Character Browser
- + Improved Ansi Explorer
- + Improved Color Browser
- + Tabbed Panel
- + Improved Frames

2.1.25 Beta 5 **May/29/2005**

INI ERROR :

If the lastpath is equal with "Desktop" (in our language "Asztal"), then the same path not found message appears. I think this would happen with any other strange paths.

Status : Done.

Format/Decrease Indent/Format/Increase Indent:

After investigate another "free software" that uses codemax control this problem replicates again.

You can check this from sourceedit editor at webpage : <http://www.sourceedit.com>

I have discovered that Indent/Outdent functions like Visual Basic. Try pressing Tab for indent & shift+tab

for outdent. For this moment i think this "bug" leaves as "soft close". I will try to find another way to do that no using codemax methods. Maybe the codemax updates (at this this 4.x.x) has resolved this "problem" or maybe implemented more events for this.

Javascript Plus! uses codemax 2.2 (an older freeware release).

View/Favourites Explorer

I would remove the " :" after the "File" in the error message (~the one which comes up if you have opened that favourite already)

Status :Done.

- how to delete a macro from the program?

A.- The only way to delete a macro is overwrite.

- how do you remember what the 10th macro is? (as you can't give a name to the macro...)

A.- The macro process is managed by codesense control. I was investigating if the control tells me

in any events when finished the macro process. The codesense control doesn't tell me the macro process. (almost in 2.x).

- you are able to define function keys even if they were already in use (fe. Ctrl+M,M)

A.- I try saving Ctrl+N (New Document) as Macro 1. When i pressed Ctrl+N the New Document runs.

But if i select "run macro" and select Macro 1 the "macro code" is fired.

Settings/Configure Editor

You may improve it later, i would rename it to "Configure Colors" or "Configure Editor Colors".
- if you modify "comment" colors, the "<!--" part won't change, only the "///" parts;
Status : Done.

- + Added a Copy button in Insert Predefined Template
- + Removed insert line.
- + Added a save macro to hard disk.
- + Fixed bug with "strange paths".
- + Fixed coloured syntax for html & javascript
- + Fixed & for email plus.
- + Add new folders for :
 - templates (user templates & predefined templates)
 - help (jsplus help, html css & javascript)
 - js (user files)
 - macros (saved macros)
 - pal (color palettes for color mistakes)

Plus!/Drop Down Menu

You should rename "Button Text" to something like "Submit text" (I've noticed that it's not a submit input, but it works as a submit button). Also, you may want to add "Item name" to the list.
* Done

HTML/Image

- choose an image and align it to "At the bottom": there's no align HTML code;
* Done.

(not big-bug)- try to fill up all possibilities: there are too many blank spaces in the code;
* Done.

It would be also good if the parts would follow the ABC (like: "A"lt/"B"order/"C"lass/ecw.)
* It's a good idea. I will change this in a future.

HTML/Forms

Is there a reason to choose from Mail/FTP/ecw.?
* : Yes/No. All give flexibility.

I suggest to add enctype to the script. Usually (at form tags),
* : Done.

HTML/Forms/Checkbox

1 more space between type and name values.
* : Done.

JavaScript/Insert User Templates

It's has the same problem as some other window: click on Ok and it won't unload.
* Done.

- how to delete/modify a template?
* : Now you can delete/modify a template.

2.1.25 Beta 4 **May/26/2005.**

File/Exit: "At first, you should ask if you want to SAVE the user's file and only after this, you can ask if he wants to close the program itself. "

R. Done.

JavaScript/window

- Window alert: i think it shouldn't be an alert-prompt combo. I think a right example would be:

Code:

```
function my_alert()
{
alert("Your text");
}
```

R. Done.

Window prompt: the Window alert's script would be better here;

R. Done.

Window confirm: there's a missing last "}" sign from the end of script;

R. Done.

Window popup: see Plus!/Popup window below;

R.- Done.

Plus!/Image Rollover : I would attach a setting for image border.

R.- Done.

Plus!/Popup Window :

"Function should at the first line and should be separated from the others."

R.- Done.

"The window won't unload automaticly after pressing Ok."

R.- Done.

"Also, other script haven't got the "<script.. " and the closing tag, so it should be removed."

R.- Done.

"It would be wise to place a browse icon next to the "Link" field, so the user can select the file he want to show to the visitors."

R.- Done.

"I think the "Window name" is missleading, maybe "Window identifier" would be better."

R.- Done.

Plus!/Configure Meta Tags

- <META http-equiv="Content-Type" CONTENT="text/html; charset=iso-8859-1"> This isn't very good, as fe. me is using iso-2, instead of 1. I suggest to remove this feature or to add a combo box, so the user can choose the encoding.

- R. Done. "charset=iso-8859-1". Removed.

Plus!/Email ...

"email-form": you must put characters between the words instead of spaces or it mightn't work with some e-mail clients (fe. ms outlook). I think you may use the "&body=text_to_message_body", but not all e-mail client can handle the &body (fe. some mozilla-based). Also, if you want to use it, you can use the "%0A" as the code of break line ("fe:

&body=Dear Customer!%0A%0AI hope you enjoyed your stay!%0A%0AYour sincerely,%0AThe Director"). Also, it would be wise to use

<form action=mailto:... instead of the onclick (i don't know who'd use this onclick method with a form...) fe:

Code:

```
<form action="mailto:yourname@yourcompany.com&subject=Homepage" method="POST"
ENCTYPE="text/plain">
<textarea name="Information" cols="50" rows="10"></textarea>
<input type="submit" value="Send">
</form>
```

Even better, if first you use the action to send the form to a script, which'll check the contents of the form.

R.- Done. Changed to Email Form.

"Search/Replace : I would rename it to "Find & Replace"."

R.- Finally i kept Find & replace. Wink

2.1.25 Beta 3 May/25/2005

"File: You can't close "Noname 1". Not a big-bug, just to mention it. "

R. This will be fixed on future releases not in 2.1.x or 2.x. Wink

Functions/Refresh

"As i told you, the "Refresh" word is misleading. I would either remove or rename this option (fe. to Save).

- Click on Refresh: "Update file" This sentence isn't user-friendly Smile. Let ask it: "Do you want to update your project?"

- If you click on "Yes", then choose "Cancel": "An error a try to update file." Grammar problems, but i think you don't need any error messages here, if the user click on the Cancel button (~so he might noticed that Smile."

R.- Done.

Search : "It look that searching is working for the first success or not working for me."

Search/Find: "the searching stops and is unloading itself at the first success ..."

R.- Very strange. The edit features are management for the codesense control. I did any typical exercises without problem. May be that your country codepage is not fully supported by the codesense control. You can post this question in winmain forum. (<http://www.winmain.com>)

"Search/Replace : I would rename it to "Find & Replace"."

R.- Done.

"I had to "Bárbár" and wanted to change them to "Barbár", but it didn't work;"

R.- This was replicated using BárBár or Bárbár words and the search & replace functions works perfectly. If i'm wrong please give to me an example or step by step to try to reproduce the bug.

Format/Decrease Indent : "It look that you must select at least 2 lines to decrease it for a text."

R.- Testing ...

Format/Increase Indent : "It won't work with text selecting as it'll delete it..."

R.- Testing ...

Insert/Insert File... : "I would rename it to "Insert File Contents...". "

R. Done

Functions : "Delete" (Improvements)

R.- This features was deleted.

JavaScript/IF "if .. the" I think you wanted to write "if ... then ... else"
R.- Done.

Plus! : "I would share Plus! to technical parts, fe. the Colored Scrollbar and the Mouseover Text links are using CSS technology, so a CSS sub menu should be created. "
R. Done.

Utilities :
"You should move "Validate..." things to "Help/Validate/Validate ...".
"I would move the Utilities below "Plus!", so user can still access it from Plus!/Utilities/Utility name. "
R.- Done.

Shell
"I think you don't need it as a main File menu item, maybe move it below Plus! (so it'd be Plus!/Shell/Operation name)"
"you can still use the button, even if you can't see the explorer bar; "
R.- Done.

Shell/File Find... "Not working for me under xp sp2. (nothing happens)"
R.- Very strange. This is called using API Windows Interface. The find command is "find".
This works perfectly. I think regional settings problems ...

Shell/File Explorer... "You can call it on the same name, "Windows Explorer"."
R.- Done.

2.1.25 (May/21/2005) Beta 2

- + Includes Javascript Help (.hlp) (rev1)
- + Improves the script features
- deleted the project features
- deleted the Javascript Quick Help
- + minor bugs fixed

2.1.25 (May/18/2005) Beta 1

- * Many initial bugs fixed.
- + Includes 11 Javascript Plus! Wizards (Add to Favorites, Colored Scrollbar, Drop Down Menu, Email Link, IFrame Wizard, Image Rollover, Last Modified Date, Left Menu, Meta Tag, MouseOver Text Links, Popup Window)
