

## Development Task

The task is to design a webpage that takes two user inputs that is a Wikipedia article name (example: water) and a language and displays the corresponding Wikipedia content. The language input is a dropdown menu that consists of 5 languages including English as default. The page must be divided into two parts. The left sidebar comprises of the two input fields and the right sidebar displays the content. When the webpage is accessed through a small window such as a mobile, the left sidebar must act as a toggle sidebar accessible via a hamburger menu. The webpage should display appropriate error when the content is not available.

You may access the Wikipedia content through this [Wikipedia API](#).

The task is to be completed using native HTML, CSS and JavaScript that is without the usage of any JavaScript framework/ library.

You are expected to complete the task within 24 hours.

You are expected to use a version control system such as GitHub to upload only the code and screenshots of the webpage. You must share the link with us when you are done.

Once you submit the task, our team will review it and provide you feedback within 24 hours.

By attempting this task, you are agreeing not to disclose this task publically.

We are excited to see your work.

Best of luck.
