

Notifo - Notification Service

Notifo is a multi-channel notification service for collaboration tools, e-commerce, news, magazines and everybody who wants to notify their users.

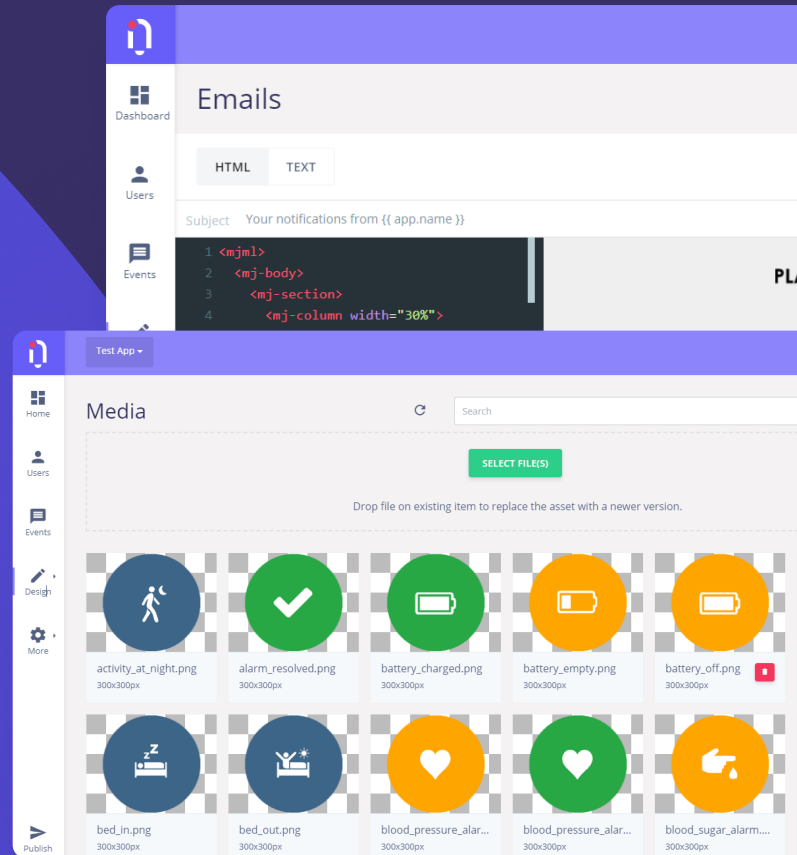

The top screenshot displays the 'Edit ACTIVITY_AT_NIGHT' template configuration page. It includes a sidebar with navigation options: Home, Users, Events, Designs, and More. The main content area is divided into two sections: 'Templates' and 'Edit ACTIVITY_AT_NIGHT'. The 'Templates' section lists various event types: ACTIVATED, ACTIVITY_AT_NIGHT (selected), ALARM_RESOLVED, BATTERY_CHARGED, BATTERY_EMPTY, and BATTERY_OFF. The 'Edit ACTIVITY_AT_NIGHT' section allows editing the template's code, subject, body, and small image. A preview of the notification is shown on the right, featuring a red dot icon and the text: 'Nächtliche Aktivität ((household)) | Aktivität während der Nachtzeit', 'Zum Haushalt', and 'A few minutes ago'. A 'NOTIFO' button is visible at the bottom right of the preview.

The bottom screenshot displays the 'User Details' page. It includes a sidebar with navigation options: Home, Users, Events, Design, and More. The main content area is divided into two sections: 'Notifications' and 'Channels'. The 'Notifications' section shows a total of 14.7 k notifications, with 6 failed notifications. The 'Channels' section lists various notification channels and their counts: Email (11), Messaging (0), Mobile Push (24.4 k), SMS (0), Webhook (0), and Web Push (29.2 k). Below these sections is a table of notifications with columns for 'Subject' and 'Timestamp'. The table lists two notifications: 'Wohnung verlassen' and 'Offenstehende Tür geschlossen', both timestamped 'about 2 hours ago'. A 'PUBLISH' button is visible at the bottom right of the page.

Design System

Design your notifications and messages with media items and templates.

1. MJML to design email templates.
2. Design messaging and SMS templates with simple text interpolation.
3. Build templates for your notifications with preview for all platforms.

Web Plugin

Embeddable web plugin for all browser and frameworks.

1. Let the user subscribe to topics.
2. Let the user subscribe to web push notifications (Firefox and Chrome) and manages all the hustle.
3. Pushes notifications to the plugin using web sockets or polling.

Wohnung verlassen

Sarah Eichbaum | Bewohner hat die Wohnung verlassen
[Zum Haushalt](#)
about 2 hours

Offenstehende Tür geschlossen

Sarah Eichbaum | Die offenstehende Tür wurde geschlossen
[Zum Haushalt](#)
about 2 hours

Tür lange geöffnet

Sarah Eichbaum | Eine Türe ist seit längerem geöffnet
[Zum Haushalt](#)

Deployment and Monitoring

1. Provided as container image and easy to install on docker, kubernetes and all major cloud providers.
2. Integrated logging system to inform you when a notification cannot be delivered.
3. Tracking of notifications from the API to the end user device.
4. Easy logging system and integration for Open Telemetry.

The top screenshot shows the 'Events' page of a web application. It features a sidebar with navigation links: Home, Users, Events, Design, and More. The main content area is titled 'Events' and contains a table with columns: Subject, Topic, and Timestamp. The table lists several events, all with a timestamp of 'less than a minute ago'.

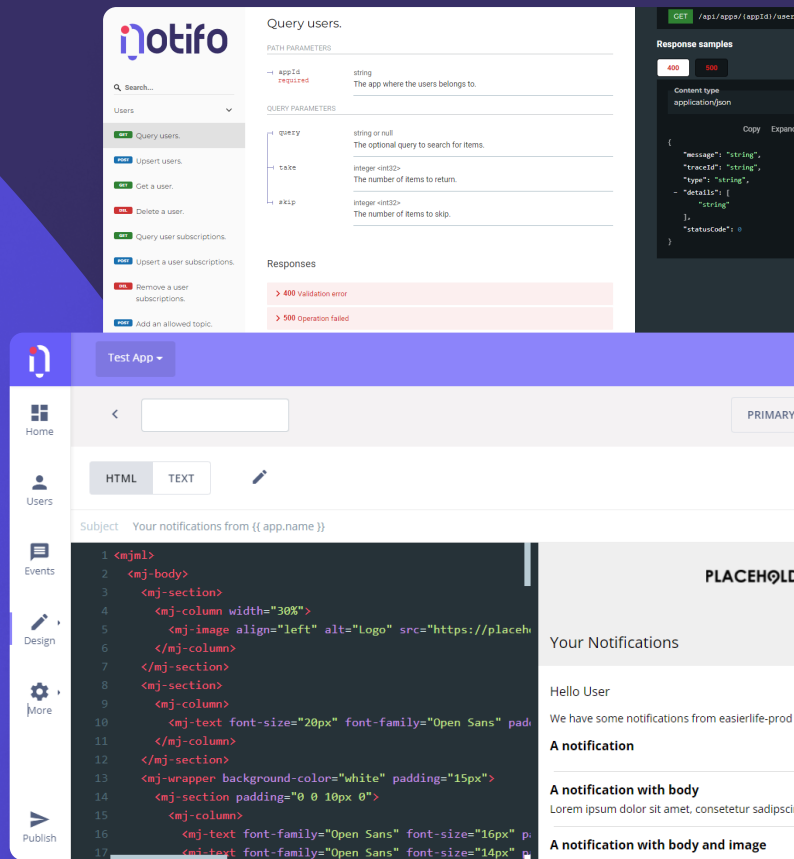

Subject	Topic	Timestamp
Benutzeralarm	users/376	less than a minute ago
Tur geoffnet	users/1209	less than a minute ago
Tur geoffnet	users/1208	less than a minute ago
Tur geoffnet	users/1138	less than a minute ago
Tur geoffnet	users/1122	less than a minute ago
Tur geoffnet	users/1542	less than a minute ago

The bottom screenshot shows the 'Log' page of the same web application. It features the same sidebar. The main content area is titled 'Log' and contains a table with columns: Message, Count, and Last seen. The table lists several log messages, including 'WEBPUSH: Token does not exist anymore.', 'MOBILEPUSH: Token has been removed.', and 'Notification has no existing user. It has probably been deleted.'.

Message	Count	Last seen
WEBPUSH: Token does not exist anymore.	5.8 k	2 minutes ago
MOBILEPUSH: Token has been removed.	2.3 k	2 minutes ago
Notification has no existing user. It has probably been deleted.	321	1 day ago
Event with this id has already been processed.	149	2 days ago
Event has no subscriber.	149	2 days ago
Notification has no subject for user.	105	2 days ago
WEBPUSH: Received unexpected response code: 502. Details: <html> <head>...	4	5 days ago
WEBPUSH: Received unexpected response code: 406	15	about 1 month ago
EMAIL: Cannot find language de in template.	1	about 2 months ago

Highlights

1. Powerful and rich REST API with OpenAPI documentation.
2. Rich design features for notifications with preview for all platforms.
3. Email templates with MJML and support for multiple email providers.
4. Growing number of integrations, SDKs for mobile platforms and web browsers.

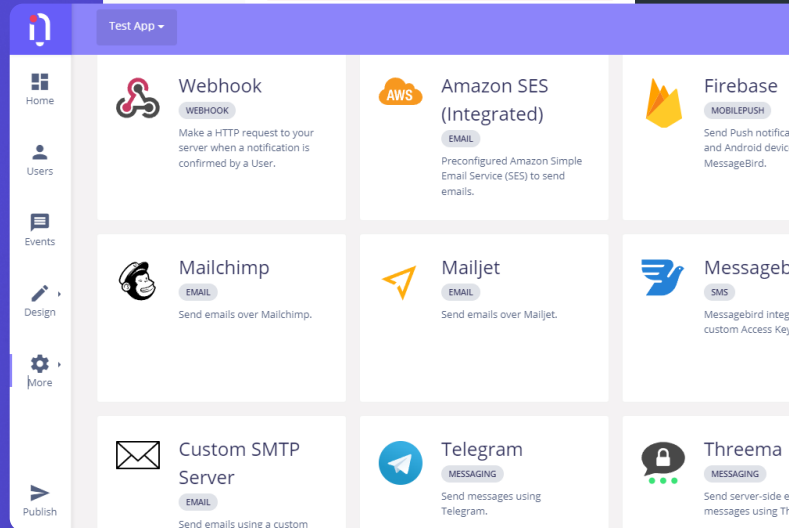

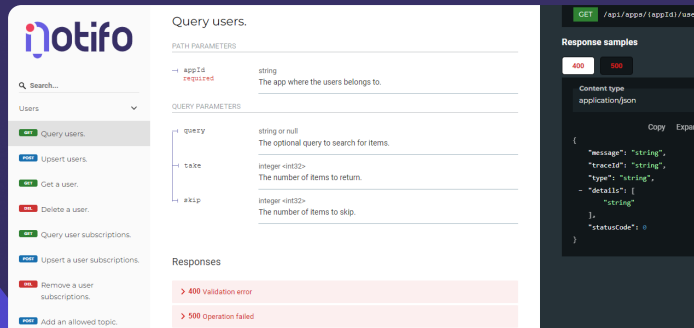

Integrations

Leverage an existing number of integrations to channel providers and services.

1. Send notifications to these channels:

- Web Push
- Mobile Push
- SMS
- Messaging
- Email

2. Integrate external providers and configure fallbacks.

User Management

Manage and create your users with the API and the dashboard.

1. Easy to use user-management system.
2. Detailed logs for all notifications and status tracking for all channels.
3. Statistics up to the user level about the number of failed and completed notifications.
