

Meeting 1 Summary

- Got to know each other
- Decided on website idea – Website for finding Roommates
- Decided on website name – “Roo.me”. Read as "roomie"
 - URL should be roo.me (/ “roo-me” if Github wont like it)

Division of tasks:

1. Danny: vagrant
2. Alon: bootstrap.sh
3. Micha: Django
4. Tamir: Web page
5. Nadav: ReadMe file
6. Amit: flake8

Main purpose:

This website will be used for various people looking to get into a roommate apartment or people looking to find roommates for their apartment. The website will have a user-friendly, Easy “yes or no” interface. The user will be able to pick his own preferences and get results fittingly. When matched, a contact sheet will be shared and both parties continue their arrangement.

Workflow:

This part of the project will consist at least 6 PRs, one by each student by completing his task.

Don't forget to clone/pull before you start working on your part

Keep all the other team members up to date by stating it when you finish your tasks / encounter problems.

Use the Github issues and link your PR's.

Goals:

- Complete all PR's, Able to “vagrant up” and run the static page by Thursday.
- Zoom meeting to discuss the demo Thursday evening.
