

Position: Data Engineer (Google Cloud Platform Specialist)

Duration: Permanent Position

Key Responsibilities:

- Collaborate with data scientists and architects to transform complex data sources into understandable, relevant insights for our users.
- Design, develop, and deploy data pipelines and infrastructure using GCP tools and services.
- Advise clients on the implementation of best practices and strategies in data management on the Google Cloud Platform.
- Work closely with multi-disciplinary teams and clients, ensuring timely and effective communication.

Required Hard Skills:

- Minimum 5 years of experience in Data Engineer positions.
- Google Cloud Platform Expertise: Proficiency in GCP tools such as BigQuery, Dataflow, Pub/Sub, Dataproc, and Composer.
- Data Modeling: Ability to design and implement efficient and scalable data models.
- Data Integration: Proficiency in ETL/ELT processes and tools.
- Programming: Solid experience with languages like Python, Java, or Scala.
- Databases: Strong knowledge in both SQL-based databases (like PostgreSQL, MySQL) and NoSQL databases (like MongoDB, Cassandra).
- Version Control: Proficiency with tools like Git.

Required Soft Skills:

- Strong Communication: Ability to explain complex technical details in simple terms to non-technical stakeholders.
- Team Player: Demonstrated ability to work well in a collaborative environment.
- Problem-solving: Strong analytical and critical thinking skills.
- User-focused: Ability to understand and anticipate user needs, ensuring their satisfaction.
- Continuous Learner: Passionate about keeping updated with emerging technologies and best practices in data engineering.

Preferred Qualifications:

- Bachelor's degree in Computer Science, Data Science, or a related field. Advanced degrees are a plus.
- Google Cloud Professional Data Engineer certification.
- Experience in consulting or a client-facing role.
- Prior experience working in a technology company focused on data science consulting.
