```
0 { Branch-table data transfer routines }
1
2 BTADDR @ BTCNT @      \ get address & length of branch-table
3 FORGET HUFFCNT        \ forget compiler code
4 HERE BTADDR !         \ save new branch-table address
5 DUP ALLLOT            \ allot space
6 BTADDR @ SWAP CMOVE    \ move data -- voila!
7
8 \ This stuff moves the huffman decode table, etc. from the
9 \ encoder to the decoder and throws the encoder away.
